

# Case Study

## A Germ Free Space Children's Healing Center

APPLICATION OF SURFACE SHIELD: 9/23/15

### OVERVIEW

At first glance, the CHC mostly looks like a fun place for kids. But upon closer inspection, you'll find that they have taken every precaution for the safety and well-being of children coping with cancer, autoimmune disorders, organ transplants and other medical conditions that leave them at greater risk for infection than their peers. The space conforms to hospital-grade technical requirements, including: HEPA air filtration, filtered tap water, microbial-resistant surfaces, no carpet or other materials that harbor germs, easy-to-clean toys and programming materials, strictly controlled cleaning and infection policies and a highly trained staff.

### GOALS

The Mission of the Children's Healing Center is: Provide a safe, clean, and engaging environment for kids with weak immune systems to interact with others.

This center is the first in the nation to provide a 'safe germ free space' for children with weakened immune system to have the chance to be 'normal' - play, interact with other kids, take extracurricular classes and have fun outside of the home.

### SPECIFICATIONS

The Center features a clean environment designed to provide as close to a germ-free space as possible.

Must Be Germ Free

Must Be Safe

Must Be Clean

Surface Shield was the perfect solution for keeping the environment at the Children's Healing Center germ free. It was the key to protecting surfaces from the growth of bacteria, mold, mildew, algae, and yeast - all harmful to children with weakened immune systems.
